EXPERIENCE

Software Engineer

Oct 2024 – Present

LTM - Java Full-Stack

Pune, MH

- Engineered scalable microservices in **Java**, **Spring Boot**, and **Angular** with **RESTful APIs**, optimizing databases by 25% for high availability.
- Designed and maintained microservices** for a banking payments platform, achieving 99.9% system uptime, resolving critical production incidents, and earning an award nomination for performance and reliability.
- Optimized and resolved production issues through **debugging and troubleshooting**, reducing downtime by 25% and strengthening overall platform stability.
- Achieved **100% on-time delivery** of Agile project milestones, improving client satisfaction and trust.
- Earned a **“Rising Star”** award nomination in recognition of exceptional performance and contributions to project delivery.

PROJECTS

AlgoTrade | *Java, Spring Boot, React, WebSocket, Docker*

Mar 2026 – Present

- Engineered a **3-stage Auto Stock Selector pipeline** that dynamically scans **1,700+ NSE equity stocks (SENSEX, NIFTY50, NIFTY100, N200)**, filtering from the full universe to a single optimal intraday target via ATR momentum scoring, deep indicator analysis, and confidence thresholding.
- Developed a **SelfLearningService** that autonomously tunes strategy signal weights every 4 hours by analysing the last 50 closed live trades — adjusting component weights by up to $\pm 15\%$ per cycle based on win rate, profit factor, and signal-outcome correlation — enabling adaptive strategy optimisation without manual intervention.
- Integrated **Zerodha KiteTicker WebSocket** for real-time tick streaming; broadcast live prices to a React 18 frontend via **Spring WebSocket/STOMP** and applied Caffeine caching to reduce redundant market-data calls and Resilience4j circuit breakers to prevent cascade failures during peak market hours.

Spring Boot Transformation Services Implementation | *Spring Boot, Apache Camel*

Mar 2025 – Present

- Accelerated modernization of integration services across **France, Germany, and the UK** by re-architecting the aging **IBM Integration Bus (IIB)**, resulting in a confirmed annual cost reduction of 35%.
- Transformed legacy data flows to Spring Boot-based services, slashing processing time by 60% and elevating query performance by 30% for solutions handling **10K+ daily transactions**.
- Enabled 100% API-driven interoperability across partner systems, laying the foundation for future integrations including **China Abacus and HUB Modernization**.

Facial Sentiment Analysis of Patients in Hospitals | *Python, YOLOv3, CNN*

Dec 2023 – Apr 2024

- Programmed a real-time Facial Emotion Recognition system to monitor 50+ patients daily, improving diagnostic accuracy by 20%.
- Enhanced patient well-being tracking with CNN-based models, reducing misclassification rates by 15% while ensuring compliance with healthcare data privacy standards.
- Published a research paper on applying FER** in hospital environments, validated on a dataset of 5K+ facial images with an achieved accuracy of 85%.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL, JavaScript, HTML/CSS

Frameworks: Angular, Spring Boot, React, Node.js, Apache Camel

Developer Tools: Git, Docker, VS Code, Visual Studio, PyCharm, IntelliJ, Eclipse

Libraries: pandas, NumPy, Matplotlib

Methodologies & Practices: REST APIs, Microservices, Agile, CI/CD, Unit Testing (JUnit), Maven

EDUCATION

CMR College of Engineering and Technology

Bachelor of Technology, Computer Science – CGPA: 8.18

Hyderabad, Telangana

Oct 2020 – May 2024
